WEIGHUP HEIGHT ADJUSTABLE WEIGH SCALE

REDUCES HEAVY LIFTING AND
MANUAL HANDLING

HEALTH & SAFETY FEATURES

- Hydraulic lifting mechanism to reduce heavy lifting
- "Lock Out" if overloaded to stop unsafe lifting
- Strong steel frame to fix to the ground for safe loading
- Easy to use handheld controller for raising and lowering

Specifications:

- Maximum height: 800mm | Minimum height: 100mm
- Maximum Weighing Capacity: 1500kg

The WeighUP is a revolutionary weighing solution specially designed to reduce the risks associated with manual handling and heavy lifting during weighing. This unique weighing scale allows a pallet to be lifted up to a safe working height for easy loading, reducing the risk of injuries caused by bending down or over-reaching. An operator controlled hydraulic lifting mechanism effortlessly raises the scale and the height can then be easily raised and lowered as required. WeighUP is designed for Euro Pallets as standard but can be customised for other pallet sizes.
